

CONDOR GOLD LINE Surgical Retractor System

Precision work in the operating room is the most important thing. We offer you the perfect support for surgical interventions with the patented **CONDOR GOLD LINE Surgical Retractor System**. We combine practically-oriented know-how, many years of experience, innovative technology and quality work "made in Germany". The result: A surgical tool for the surgeon, which – thanks to its multifunctional utilisation possibilities – shows itself to be much more flexible and efficient than conventional systems.

Internationally utilised standard surgical equipment

Our surgical retractor systems are indispensable equipment for any surgeon. They are amongst the standard equipment in university hospitals, general hospitals and clinics in Europe, North and South America as well as in Asia. They create leeway for working easily, comfortably and cost-efficiently in the operating room.

The basis for this purpose is offered by an intelligent and modular system that can be precisely coordinated to the respective surgical intervention in combination with wound retractor models for special surgical interventions. In accordance with the modular principle, our surgical retractor systems are individually configurable and fully compatible – i.e. you can determine which retractors you order from our various sets.

The following Surgical Retractor System sets are available for surgery. Put together your customised surgical set from the components of the individual sets:

Abdominal (Maxi)

Upper abdomen

Thyroid (Mini)

Proctology

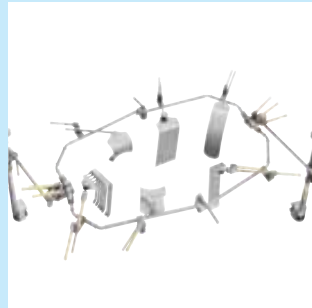

All together are the core elements and advantages of the CONDOR Basic Surgical Retractor Set, which with its unique spherical elements enables excellent adjustments and latitude in all surgical interventions. The modular-compiled systems are applicable on a multifunctional basis, and brought into perfect position with only a few flicks of the wrist. Patented blade holders ensure optimal, in-depth adjustment – tip emphasises. Further advantage: The integrated insulation in the central holder precludes endangerment of the patient through high-frequency leakage current.

Get to know the CONDOR GOLD LINE Surgical Retractor System. We will gladly provide you with a free loaned system.

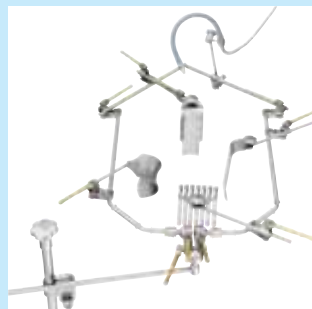

Abdominal (Maxi): Precision help for abdominal operations

Specially developed for the requirements and specifics in the abdominal region, the CONDOR Abdominal Maxi Surgical Retractor System enables perfect precision work with abdominal operations. The specific requirements are especially taken into consideration while doing so: For instance, ball-and-socket joints help to lift the abdominal wall in order to better mobilise the right or left flexure during intestinal operations. Every side can be lifted separately and lowered while doing so.

Special blade holders with ball-and-socket joints enable tip emphasised work. The abdominal system is also applicable in deep rectal surgery. The situs can also be adjusted optimally and quietly in the event of pronounced adiposity, since two systems can be coupled in this case.

An overview of the advantages of the CONDOR Abdominal Maxi sets:

- Perfectly attuned for abdominal operations
- Lifting the abdominal wall or mobilisation of flexure is possible through ball-and-socket joints
- Tip emphasised work is easily realisable
- Adjustments possible for deep rectal surgery
- Utilisation in adiposity surgery

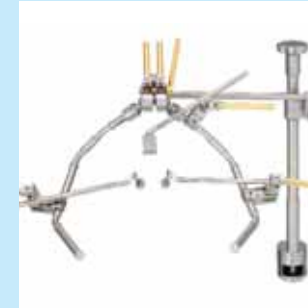

Upper abdomen: high standards for upper abdominal interventions

An addition which ideally combines the advantages of the Rochard principle and the retractor system is available to you via the CONDOR Upper Abdomen Surgical Retractor System for upper abdominal interventions such as liver, stomach or oesophagus. The upper abdominal system remains sterile from the beginning to the end of the operation. The system can be adjusted in any optional angle. Our upper abdominal sets are regarded as ideal support for precise work.

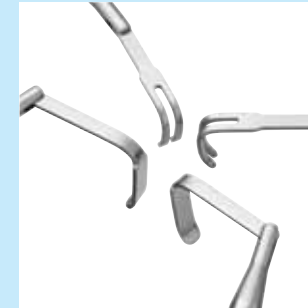

Overview of the advantages of CONDOR Addition Sets for upper abdominal interventions:

- Maximum freedom of movement during upper abdominal operations
- Combination of Rochard principle and retractor systems is possible
- Adjustment of the system in any optional angle
- Upper Abdominal Set remains sterile throughout the entire operation

Thyroid (Mini): Precision surgical instrument for thyroid gland operations

Maximum quality, easy handling and modular flexibility are amongst the performance features of the Thyroid Mini Set.

The Thyroid Mini Set proves itself as particularly user-friendly, since for instance the holder arms can be adjusted so that the surgeon can work without impediments. Because of the flexibility of the retractors and clamps, the operational situs can be adjusted individually. The camera & instrument holder guarantees smooth camera and instrument operation.

The Thyroid Mini Set features yet another highlight: In addition to the standard method, mini retractors are also included in our portfolio. As a result, CONDOR is the only provider on the market for retractor systems that offers instruments for the minimal invasive method.

An overview of the advantages of the CONDOR Thyroid Set:

- User-friendly
- Trouble-free working above the system
- Utilisation of mini retractors (Mivat method) is possible
- Camera & instrument holder

Proctology: precise adjustments for rectal operations

The Proctology Sets of the CONDOR Surgical Retractor System are perfectly thought-out and adapted. They enable precise adjustment with regard to rectal operations in which instruments and systems are not obstructive, but guarantee barrier-free working. The flexibly applicable cold light is a demonstration of the practical experience and the exacting demands which we allow to prevail during the development and refinement of our systems.

Additional retractors – according to Alan Parks or also Langenbeck, in various lengths – enable optimal adjustment in any desired depth. The special feature about this: CONDOR is also the sole provider for this system. Only CONDOR offers you this precision and these utilisation possibilities within the realm of proctology.

An overview of the advantages of the CONDOR Additional Set for Proctology:

- Perfect adjustments (also in the depth) for proctology operations
- Barrier-free working above and beyond the system
- Flexibly applicable cold light

You see: There are many convincing reasons to get to know the CONDOR Surgical Retractor System. We will gladly offer you the opportunity to do so – free of charge! Experience the practical advantages of our systems. Simply request a loan order. The following also applies: You can put the loan order systems together in accordance with the modular principle. You profit from the modularity of the CONDOR Surgical Retractor System.

Internationally recognised and utilised worldwide: CONDOR GOLD LINE

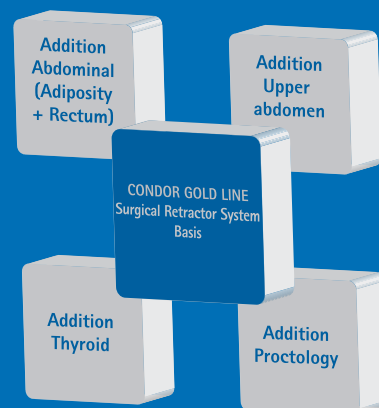

An overview of the advantages of the CONDOR Surgical Retractor System:

- Interchangeable on a modular basis
- Compatibility of retractors
- Multi-functionality
- 3-D setting
- Simple operability
- In-depth situs adjustment
- Electrical safety
- User training through operating room accompaniment
- Easy cleaning of the device
- Optimisation of operational costs
- Certified in accordance with EN ISO 13485:2003 C €0044
- Relief provided by qualified personnel
- Made in Germany

In addition to the Surgical Addition Set, additional systems for gynaecology, orthopaedics and urology are also included in our portfolio.

The system's individual modularity, which can be compiled on the basic version platform and is completely compatible, also follows the exacting demands for tailor-made solutions for surgical operations.
