

CONDOR GOLD LINE Gynaecology Surgical Retractor System

Perfect and precise assistance in gynaecological surgery – this is what our patented surgical retractor system GOLD LINE offers to gynaecology. Our surgical retractor systems are the result of long-term experience, innovative technology, practical know-how and high-quality work »Made in Germany«. Work more flexibly, efficiently and precisely with CONDOR precision instruments – »Made in Germany«! With its multifunctional options of use, our systems prove to be more flexible and more efficient than common systems.

When talking about high-quality surgery technology, CONDOR is among the innovation boosters and market leaders. Today, our surgical retractor systems belong to the standard equipment of many clinics throughout the world. Around the globe, the name CONDOR stands for customised high-quality work and the CONDOR Surgical Retractor System is synonymous with flexible, comfortable and cost-efficient working.

Full compatibility

Most of all, the modular design of the system is appreciated. In combination with retractor models used in special surgical interventions, the basic set may be exactly adjusted to the respective surgical procedure. Our retractor systems can be combined individually and are fully compatible due to the modular design.

In addition to its compatibility, the surgical retractor system convinces the user in the operating theatre as well as the head of finance in many respects. While one praises the flexible use, practical handling and the modular design of the system, the other appreciates the excellent price-performance ratio as well as the process optimisation which is achieved with the use of our systems.

CONDOR GOLD LINE for gynaecological surgery

The following surgical retractor sets are available for gynaecology:

Abdominal Maxi

Adiposity

Vaginal Mini

Axilla Mini

The core elements and advantages of the CONDOR Basic Surgical Retractor Set is common to all sets: its unique ball elements guarantee precise settings and maximum freedom of movement in all gynaecological interventions. The modular design of the system can be put to multifunctional use and can be brought into position with just a few swift actions. The ideal, tip-focused in-depth setting is achieved by the patented blade holder.

Are you interested and would you like to familiarise yourself with this essential surgical aid? We would be pleased to place a courtesy test equipment at your disposal.

Work more flexibly, efficiently and precisely with CONDOR pre

Abdominal Maxi Set

Especially developed to fulfil the requirements of abdominal hysterectomy, the CONDOR Abdominal Maxi Set allows for perfect precision during surgery. Furthermore, the system is frequently and very successfully used in major abdominal interventions such as the Wertheim's operation.

By means of the special blade holder with ball joint, exact and tip-focused working in the depth can be easily performed. To the surgeon this means: maximum freedom of movement and an open access to the surgical site and ideal conditions for absolute precision work at the same time. With the tip-focused blade holder, CONDOR offers the only blade holder available on the market which creates this kind of open and flexible setting for abdominal interventions.

Advantages of the CONDOR Abdominal Maxi Set:

- Highest possible flexibility and freedom of movement
- Tip-focused setting options through patented blade holder
- Can be combined with cold light
- Lifting of abdominal wall / costal arches

Adipose female patients

The special retractors by CONDOR, which are available in different lengths and widths, are an ideal aid in gynaecological surgery in adipose female patients. They allow for an ideal site adjustment, even under difficult circumstances. In extreme adipose female patients (>170 kg), two systems can be combined with each other.

Vaginal Mini Set

Ideal assistance is offered by the CONDOR Vaginal Mini Set in vaginal interventions. Only one medical assistant is required. CONDOR gives freedom to the qualified personnel to perform more effective tasks. The use of the set makes work much easier, especially for surgical assistants: no more awkward postures during assisting at the table. Vaginal surgical retractors can be easily and quickly positioned by means of flexible blade holders. The surgical site can thus be exactly adjusted to the respective surgical situation anytime.

Special surgical retractors allow for the use of the CONDOR Vaginal Maxi Set in transvaginal sacrospinal fixation in vaginal prolapse.

Gyn Adapter

The Gyn Adapter completes the CONDOR Mini Set. Vaginal specula may be fixed to it, thereby allowing for the continued use of specula which already exist in your clinic. The Gyn Adapter proves to be a reasonable extension to the Mini Set since with the purchase of this small adapter, equipment which already exists can still be used.

An overview of the advantages of the CONDOR Vaginal Mini Set:

- Ideal for transvaginal interventions such as prolaps surgery
- Quick change of the lateral retractors
- Making work much more easy for medical assistants
- Ideal setting of the surgical site

Axilla Mini Set

The CONDOR Axilla Mini Set is an ideal assistant in axillary revision. It offers you an optimal and steady-set surgical site. Readjustment of retractors is no longer required. The addition of cold light provides an excellent illumination of the surgical area. In addition to the standard retractors, the product range also includes special retractors such as the U-shaped axillary retractor.

The CONDOR Axilla Mini Set can also be used in **breast reconstruction surgery (LDFR)**. Thanks to it being possible to adjust it for either side the system can be ideally positioned in this kind of surgery.

An overview of the advantages of the CONDOR Axilla Mini Set:

- Perfectly fitting retractors for axillary revision
- Flexible cold light as an addition
- U-shaped retractors for M. pectoralis
- Special retractors designed for breast reconstruction surgery
- Individual setting of either side by means of ball joints
- Simultaneous use of retractors from the front and from behind in surgeries performed on patients who are in a lateral position

Familiarise yourself with the CONDOR Gynaecology Surgical Retractor System. Use our offer of courtesy test equipment. A qualified sales person will assist you during first use. You will be convinced of the advantages and the easy handling!

Internationally recognised and utilised worldwide: CONDOR GOLD LINE

An overview of the advantages of the CONDOR Surgical Retractor System:

- Interchangeable on a modular basis
- Compatibility of retractors
- Multi-functionality
- 3-D setting
- Simple operability
- In-depth site adjustment
- Electrical safety
- User training through surgical accompaniment
- Easy cleaning of the device
- Optimisation of operational costs
- Certified according to EN ISO 13485:2003 C€0044
- Relief of qualified personnel
- Made in Germany

Other surgical fields can also benefit from the patented surgical retractor systems: sets for general surgery, endoprosthetics and urology are presently available.

The individual modular design of the system which can be pieced together on the platform of the basic version as required and in a fully compatible way meets the high expectations of customised solutions for gynaecological surgeries.
